GROUP PROFILE

Sichuan HAIDA Rubber Group Co.,Ltd.(hereinafter referred to as HAIDA GROUP) was founded in 1970, it's a wholly owned subsidiary of WULIANGYE GROUP, national appointed and exclusive large scale backbone enterprise in Sichuan Province, committed itself in R&D, manufacturing and marketing of TBR,PCR,TBB tires, it's the largest demonstration base of research and development and production for tires in western China.

HAIDA GROUP located in Jian yang, Chengdu, Sichuan province, nearby TIANFU int'l airport and high speed train and railway station, transportation is very convenient by road or by river and air, its famous brand name covering "HAIDA", "KALEVEI", "MILEKING", "COPARTNER", "LIGHTEN", "YINLU", "TIANFU" etc., including TBR PCR and TBR tires of three categories, twenty five series, more than 1000 varieties of sizes, applying construction machinery, heavy-duty trucks, light trucks, large-scale bus, medium-sized bus, car, SUV and other commercial vehicles and passenger car of all most popular vehicles. HAIDA brand is the world-renowned brand, recommended PCR brand by China's rubber industry, famous brand of Sichuan Province; "TIANFU" trademark is well-known trademark in China.

HAIDA GROUP certificated by ISO/TS16949 and ISO9001,ISO14001 GBT28001, CCC, DOT, ECE,GCC,GSO etc., Obtained thirty seven national invention patent and practical patent, its brands enjoyed and favored by domestic and international customers with tire's excellent and stable quality.

Its marketing segments consists of local maintenance, OEM and overseas marketing, and its overseas marketing and sales volume reached US\$113 million, marketing area including North America, South America, Europe, Middle East, Oceania, African and southeast Asia of more than 200 countries or regions. HAIDA GROUP established long-term strategic partnership with Changan Ford, Sichuan Hyundai, Dongfeng Automobile, Dayun Automobile, Sinotruk, Chery automobile, Changan, General Motors, BAIC Motor, Zhongxing Auto, Suzhou Golden Dragon, Jiangling Motors, JAC, FAW and other vehicle factories. HAIDA GROUP owning more than 300 mainstream dealers in local maintenance market of all provinces, autonomous regions and municipalites throughout all China.

HAIDA GROUP main subsidiaries including Sichuan Tire & Rubber Co., Ltd., mainly produce PCR and TBB tires and Sichuan Kalevei Technology Co., Ltd., mainly produce TBR tires. Its secondary business subsidiaries: Sichuan Jianyang Tianhai Engineering Co., Ltd., Sichuan Haihong Rubber Products Co., Ltd., Sichuan Jianyang Tianli special Rubber products Co., Ltd., Sichuan Chuangui Tianwei tire Co., Ltd., Sichuan Jianyang Chuangxiang Tianfa logistics Co., Ltd., their business scope including: rubber and electronics, special rubber products, logistics and transport, etc.. The group has achieved diversified development.

HAIDA GROUP keeps continuous development and innovation, it has established a national technology center and post-doctoral workstations; its tire yearly production capacity is expected to reach 24 million pcs or sets in 2025, in which 20 million for PCR tires, 3.0 million for TBR tires, 1.0 million for TBB tires.

The water modules with design of 3D drifting simulation provides better braking performance on wet/slippy road.

The straight slots and blocks in the outer of the trad reduce the road nose and improve the grasp force when making a turn.

The design with strengthening rib in inner of tire shoulder increases the rigidity of the pattern blocks, ensures better steerablility of the tire.

PRODUCT FEATURES

Outside strong blocks design enables the tyre to follow the road's surface contours more closely, helps to reduce blocks deformation while speed cornering, and enhances steering precision & better grip.

Inside wide rib grooves ensures effective water dispersion. Sequential blocks design improves tread rib hardness, enhances braking performance.

Wide straight grooves coupled with fine slots can effectively drain the water, damage the water film, shorten the braking distance and provide better wet control performance.

Racing compound technology provides superior grip performance on wet road surfaces.

| | | | | | | | |
| | | | | | | | |

Optimum water dispersion and steering on both sides and minimum rolling resistance with the four longitudinal transverse grooves and radial sipes.

Lower road noise level and tranquil ride with the extra long tread grooves and fuzzy pattern.

Maximum grip and road adhesion with the pattern block and rib pattern on shoulders.

Strong rim-protecting ring to avoid impact for safe driving at high speed.

PRODUCT FEATURES

The strong shoulder pattern design and unique wide pattern black provide extreme grip force and handing performance, which ensured the excellent safety handing performance and passability for the vehicle on any severe road condition.

The design of anti-collision wall in the sidewall prevents the puncture , road collision and pressure damage.

The design with opened cross-grooves/shoulders provide better capability with self-cleaning and grasp force, improved the trafficability on mud/damaged road.

The utilization with wave-shape steel plates greately improved the grasp force of the tire.

The design with tooth-mate pattern grooves makes the tires having better self-cleaning capability, and improved the grasp force and trafficability on damaged road.

The design with anti-collision rib improved the self-cleaning capability and avoid the stones clamped and improved the puncture resistance of the tire.

PRODUCT FEATURES

The deep shoulder pattern design and wide pattern block provide extreme grip force, which ensured the excellent handling and safety performance for the vehicle on the severe condition such as mountain and muddy road etc.

The ideal configuration of the pattern grooves and blocks and the high proportional horizontal grooves guaranteed the excellent anti-skid performance on the muddy road.

The design of anti-collision wall in the sidewall prevents the puncture, road collision and pressure damage.

| | | | | | | | | |

Four broad longitudinal straight grooves match with creative wavy and pitching thin sipes, excellent performance on wet roads and stable steering performance.

The wide pattern block and transverse oblique grooves link broad longitudinal straight grooves, fuel-efficient, environmental and safety on driving.

The new outline and pitch design, as if across in a comfortable and tranquil city.

PRODUCT FEATURES

The overall coupling design of irregular pattern block provides stronger traction ability and grip performance

Enhanced design of tire edge anti-collision block to enhance the anti puncture ability of poor road surface

Computer simulation of the tread square profile design provides more stable grounding ability $% \left(1\right) =\left(1\right) \left(1\right) \left$

| | | | | | | | | |

Rectangle shoulder and wide tread design with 3D multiple thin sipes increases road contact area, provides superior handling on both wet and dry surfaces, and enhances wear-resisting performance.

Wide pyramidal-shaped sipes for all-weather and various roads delivers excellent safety, maintains firm grip performance and aquaplaning resistance on wet roads, and enhances off-road steering response.

Optimized pitching sequence blocks design offers quieter ride.

Unique lateral flange protector design enhances protection from puncture and impact damage.

PRODUCT FEATURES

Safety with wide tapered groove pattern applicable to all weather and various road conditions. Better country–crossing capability with its gripping power and anti–skid performance on wet roads.

Outstanding performance with high-strength steel cord and cap ply.

Tranquility with fuzzy arrangement of pattern block without specified peak and with variable sound frequency blocks.

New formula reduces 30%-40% of rolling resistance, decreases fuel consumption and CO_2 emission load.

Wide tread design increases road contact area, maintains safe ride, and enhances wear-resisting performance.

High ratio straight main sipes design effectively reduces rolling resistance and noise, perfectly combines environmental protection with comfort.

Pitching sequence shoulder blocks design shows outstanding controlling at high speed. Perfect distribution of lug type pattern with thin sipes in the tread enhances traction on wet roads.

PRODUCT FEATURES

Three broad longitudinal straight groove design with tread effectively increase the longitudinal groove width and offers tires optimum grip on wet roads and powerful water dispersion.

High ratio straight main groove matching whole block design effectively reduces rolling resistance and noise, perfectly combines environmental protection with comfort.

New formula reduces 30%-40% rolling resistance, fuel consumption and CO_2 emission load.

Arc thin sipes pattern design and the effectively segmentation pattern design improving tires grip ability and the safety on driving.

The design with widened and big pattern blocks enlarged the contacting area and rigidity, which effectively resisted the wearing, improved the service lift. The control-ability on dry/wet road and steer-ability is excellent.

The special design with gradient chamfer in grooves/blocks with better beauty to avoid the stone clamped, resisted the irregular wearing.

The alkene rubber matched with high structure wearing resistance V10H-UH carbon black, together with the new mixing technology and high wearing resistance receipt, meet the requirements on long milage performance.

PRODUCT FEATURES

The design with unique asymmetric pattern, three wide longitudinal water outlet slots and wide tread, ensures good water outlet performance ont wet/slippy road and the steerability on snow/icy road.

The big pattern block on tire external ensures good rigidity of the tire and provide good steerability.

The pattern design with multiple crossed coupling and waved 3D slot in the tire enhances the intake of snow, improved the strength of snow columns and provides powerful power to the vehicle in the winter.

Innovative radiation pattern groove design, with the optimal drainage channel and strong wetland grasping performance.

High density three-dimensional transverse serrated fine pattern design, improve the grasping performance in ice-smooth road.

The overall pattern design greatly improves the turning performance and traction on dry roads.

All-weather formula to match the reasonable tread strength to ensure the uniform wear of tire under the condition of cold and warm air.

PRODUCT FEATURES

Design with three longitudinal zigzag pattern grooves provides water drainage performance in wet road and excellent steer-ability on snow/ice road.

Design with big pattern block outside provides enough rigidity and excellent steer-ability.

Design with multiple crossed pattern inside enlarges snow holding capability and strength of snow column, and enhanced the grip capability.

The fine slots in the pattern reduced the hitting noise, the zigzag slots diffused the noise frequency, making the noise even in various frequency waves.

The wide design and pattern with new 3D sawtooth style fine sipe greatly improved the grasp area of the tread and effectively increased the grasp force of the tire on ice and snow.

The special sipe design with single direction and V shape increased the drainage performance of water and ice, improved the brake and control performance in winter on snow.

The materials such as silica etc are added in the tread compound; it is low-temperature resistance and features excellent adhesion force on the ire/snow.

SAVING-oil ecnomic grade: E WET-LAND SAFETY GRADE: C Advanced voice index number: 71

The design with 3D grooves increased the contacting area with ice and snow and improved the grasp force. The pattern design with continuous pattern in the tire cap effectively increased the ngidity of the pattern, the slant fine and wave grooves ensures better stability of steerability

The optimized design arrangement of stud hole increases the grasp force on snow/icy road and reduced the noise, providing better steerability and traction force on snow/icy road.

The design with directional V-Shape grooves enhances the flowing of water and snow in the grooves, which can effectively drainage the snow and water and provides better traction and grasp force in the snow/icy road.

PRODUCT FEATURES

The wide tire and new 3D saw tooth fine seam pattern design of the crown increase the grip area of the crown and effectively improve the ice and snow grip of the tire.

The unique single guide and V-shaped wide groove design increases the performance of water and snow drainage, and improves the braking and safe handling performance of snow driving in winter.

Silicon dioxide and other materials are added to the tread, which has low temperature resistance and excellent ice and snow adhesion.

The projected small sharp angle ensures the reliable contact of the tyre and the ground surface under low temperature, which also enhanced the grip capability.

The special design with directional pattern and various 3D steel sheets effectively enhanced the grasp capability on icy/snow pavement.

The design of shoulder pattern with rectangular shape and integrated coupling style enhanced the load capability and stable steerability on icy/snow pavement.

The design with three lengthwise zigzag grooves provide better capability to outlet the water and snow, and it also improved the steerability in slippery condition.

The projected small sharp angle ensures the reliable contact of the tyre and the ground surface under low temperature, which also enhanced the grip capability.

The special design with directional pattern and various 3D steel sheets effectively enhanced the grasp capability on icy/snow pavement.

PRODUCT FEATURES

The design with strong shoulder blocks and unique decoupling longitude grooves provides high performance of stable steerability and irregular anti-wearing on various road condition.

The design with three wide longitude water outlet slots and balanced pattern blocks/slots enhances the water outlet performance on wet/slippy road and provides excellent steerability of the vehicle. The outstanding durability provides better mileage of driving. The load capacity is stable and excellent.

The extra-strong structure design ensures the excellent braking and steering capability, which adapts various complex road & weather conditions.

Design of extra-deep pattern grooves and outstanding tread compound improves the anti-abrasion capability, which effectively prolonged the service life of the tyre.

Excellent grip on dry and wet roads for safe ride with zigzagging pattern grooves, reasonably arranged fine patterns and robust pattern blocks.

PRODUCT FEATURES

High Quality design with deep grooves pattern and wide tread surface provide excellent endurance performance.

Simple and continuous design with big pattern block and smooth lengthwise grooves provide excellent steering and drainage performance.

The pattern design with wide shoulder enhanced the grounding performance, improved the stability when turning and ensured the safety of driving.

PRODUCT FEATURES

Combined design with shoulder crosswise curve groves and lengthwise curves grooves provide good stability and safety of driving.

Design of lengthwise grooves with multiple angles provide excellent controlling and steering performance on the dry/wet road.

Strengthened design of carcass enhanced the load and impact capability of the tyre.
